M14/M1A SERVICE TOOLS Gas Cylinder Wrenches • Carbon Cleaning Tools

Original
 Issue
 USGI
 Combo
 Tool

Dual-Purpose Wrench

The gas cylinder wrench can also be used to conveniently hold the small end of the piston during cleaning. The large hole in the wrench has an internal D-shape that holds the piston from rotating without causing any damage. Both the 1/4" steel and the 1/2" aluminum models are CNC machined and designed to fit all original USGI and most commercial gas cylinders.

Cleaning Drill Set

The cleaning drill set includes a #15 (.180 dia) & Letter 'P' (.323 dia.) drill for scraping the carbon deposits from the internal bores. The drill handles are CNC machined from the 6061 aluminum with a comfortable ergonomic design.

Gas Plug Cleaning Drill

The cleaning drill is a Ltr "O" (.316 dia) drill for scraping the carbon deposits from the gas plug. The drill handle matches those in the Piston Cleaning Drill Set.

Finish

All tools are finished with an olive drab (aka O.D. Green) baked-on Non-Mar Mil-Spec coating (same spec. used by the military.) The finish is .002 -.004" thick and very durable with the added benefit of not marking the gas cylinder during use of the wrench.

Gas Cylinder Wrenches:

Steel O.D. Green	\$ 25.00
Aluminum O.D. Green	25.00
SMITH Ghost-Ring Lock Sight Wrench	35.00
Original USGI Combo Tool	8.90
Drills: 'P' & #15 Piston Drills	28.00
GAS PLUG 'O' Drill	14.00

Steel Wrench (1/4 thk.) being used to hold gas cylinder body while removing gas plug nut with USGI issued 3/8 hex combo tool (Sold separately).

Alum.Wrench (1/2 thk.) in use holding the piston in its D-shaped hole to prevent the piston from rotating during cleaning of internal carbon deposits.

Cleaning drill #15 shown cleaning a TiN coated piston.

Insert Drill "O" into gas plug to scrape and remove carbon deposits
